

List of Compliance Services

1) Air permitting and emissions compliance

Regulations we monitor (typical):

- Local Air District permits and rules (Permits to Construct/Operate, emission limits, recordkeeping, inspections, and reporting).
- California Air Resources Board (CARB) requirements that may apply to your operations, products, or equipment (program applicability is sector-specific).
- U.S. EPA Clean Air Act requirements (e.g., NSPS and NESHAP/MACT standards; Title V applicability where relevant).
- Air toxics and community risk considerations where required by local programs.

How Genesis supports compliance:

- Applicability determination and emissions-unit inventory (what equipment/processes are regulated and why).
- Permitting strategy and schedule management (new permits, permit modifications, and permit condition tracking).
- Compliance program build-out: O&M logs, monitoring plans, deviation tracking, and inspection-ready binders.
- Control technology and operational best practices review (engineering controls, housekeeping, and work-practice standards).
- Inspection readiness, NOV response support, and regulator communications.

2) Stormwater compliance (industrial and construction)

Regulations we monitor (typical):

- California State Water Board Industrial General Permit (IGP) applicability and requirements (where facility activities qualify).
- Construction General Permit (CGP) requirements for construction activities and site mobilizations (where applicable).
- Municipal MS4/NPDES and local stormwater ordinance requirements (site-specific).

How Genesis supports compliance:

- Applicability screening, enrollment/NOI support, and compliance calendar setup.
- SWPPP development/updates (site maps, pollutant source assessments, BMPs, training, and inspections).
- Sampling and monitoring management (visual observations, analytical sampling where required, lab coordination, chain-of-custody).
- Corrective action planning when benchmarks/trigger levels or observations require action.
- Annual reporting and electronic reporting support (including documentation packages for inspections).

3) Wastewater, pretreatment, and discharge permits

Regulations we monitor (typical):

- Local sewer authority/POTW pretreatment permits and local discharge limits (where you discharge to sanitary sewer).
- Federal categorical pretreatment standards where they apply to your industry/process category.
- Discharge permits for non-sanitary discharges (e.g., process wastewater, groundwater dewatering, or treated effluent), as applicable.

How Genesis supports compliance:

- Permit applications, renewals, and discharge characterization support (process descriptions, flow estimates, and treatment documentation).
- Sampling plans and data QA/QC support, with trend analysis and early-warning dashboards.
- Onsite treatment system optimization and O&M SOPs (pH control, metals removal, oil/water separation, etc., as applicable).
- Slug control/spill prevention planning aligned with permit requirements.
- Noncompliance response support: root cause analysis, corrective action plans, and regulator communications.

4) Hazardous waste and universal waste (generator compliance)

Regulations we monitor (typical):

- Federal RCRA generator requirements and California hazardous waste requirements (where applicable).
- Universal waste and common waste streams (batteries, lamps, aerosols, e-waste, and other regulated wastes depending on operations).
- Waste profiling, transport, disposal documentation, and vendor due diligence requirements.

How Genesis supports compliance:

- Waste identification/classification support and accumulation area design (labeling, segregation, and inspection logs).
- Generator status management (Very Small/Small/Large Quantity Generator implications), training requirements, and contingency planning.
- Manifesting, Land Disposal Restrictions (LDR) documentation, and disposal record management and auditing.
- Satellite accumulation implementation and container management procedures.
- Waste minimization and housekeeping improvements to reduce risk and cost.

5) Hazardous materials management, emergency planning, and storage tanks (CUPA/Unified Program)

Regulations we monitor (typical):

- Hazardous Materials Business Plan (HMBP) / California Environmental Reporting System (CERS) reporting (chemical inventory, site map, emergency procedures).
- Aboveground petroleum storage requirements (SPCC and California APSA, where thresholds are met).
- Underground storage tank (UST) compliance support where tanks are present (registration, inspections, upgrades, and closure requirements).
- Accidental release prevention programs (CalARP/RMP) where regulated substances exceed thresholds.

How Genesis supports compliance:

- CERS/HMBP preparation and annual updates, including inventory reconciliation and training documentation.
- SPCC/APSA plan development and implementation: tank inventory, secondary containment review, inspections, and training.
- Tank compliance support (aboveground/underground): inspection readiness, vendor coordination, and corrective action closure.
- Emergency response and spill preparedness procedures aligned with your operations and site layout.
- Unified Program inspection support and close-out of findings.

6) Occupational safety and health (Cal/OSHA) and industrial hygiene

Regulations we monitor (typical):

- Cal/OSHA core program requirements (Injury and Illness Prevention Program (IIPP), Hazard Communication, Emergency Action, PPE, etc.).

- Exposure-specific standards where relevant to your operations (e.g., solvents, welding fumes, silica, noise, respiratory hazards).
- HAZWOPER and Process Safety Management (PSM) screening where applicable.

How Genesis supports compliance:

- Written program development, annual review, and implementation support (IIPP, HazCom, Respiratory Protection, etc.).
- Industrial hygiene support: exposure assessment planning, sampling coordination, and engineering/administrative control recommendations.
- Training program delivery and documentation (employee training logs, drills, competency tracking).
- Incident investigations and corrective/preventive action (CAPA) documentation.
- Inspection readiness and abatement documentation if citations occur.

7) Audits, management systems, and corporate compliance operations

Regulations we monitor (typical):

- Internal corporate EHS standards, lender/insurer requirements, and customer compliance expectations (industry-specific).
- Environmental Management System (EMS) frameworks (e.g., ISO-aligned approaches where desired).
- Real estate and transaction-driven compliance requirements (lease clauses, lender requirements, and due diligence expectations).

How Genesis supports compliance:

- Baseline EHS compliance gap assessments with prioritized corrective action plans and realistic implementation sequencing.
- Compliance calendars, dashboards, and document control systems your team can run.
- Routine inspection programs (monthly/quarterly) and management review support.
- Vendor/contractor EHS coordination and onboarding tools.
- Due diligence support (Phase I/II ESAs and compliance “red flag” screening) for acquisitions, leases, and site expansions.

8) When compliance uncovers liability: triage, investigation, and funding strategy

Regulations we monitor (typical):

- Regulatory oversight pathways for environmental releases (agency jurisdiction depends on media and location).

- Reporting and response obligations for releases, as applicable (time-sensitive requirements depend on the scenario).

How Genesis supports compliance:

- Rapid release triage and response planning (containment, documentation, and regulator notifications when required).
- Transition support from compliance to investigation/remediation (conceptual site model, sampling strategy, and regulator coordination).
- Insurance archaeology coordination to identify potential historical coverage and, where viable, pursue Genesis' "No Cost Environmental Solution" for legacy releases.

Contact us today

Environmental issues can feel overwhelming. We're here to help you make sense of the complexity and move forward with confidence. Contact us to see if you're eligible for our No Cost Solution. All discussions with Genesis are confidential. Our team will follow up within 1–2 business days.
